Ahmad Metwally

Frontend Developer

Cairo, Egypt | +20 112 292 6365 | ahhmadsalehh@gmail.com

Portfolio | linkedin.com/in/ahmad-metwally-8007b9407 | github.com/AhmadMetwally711

Summary

Full-stack JavaScript developer with a Computer Engineering degree and hands-on experience building and deploying complete web applications with React, Node.js, Express and PostgreSQL/Supabase: responsive interfaces, RESTful APIs, authentication and session management, and secure database design. Seeking a junior full-stack or front-end role where I can write clean, maintainable code and contribute to a collaborative development team.

Technical Skills

Frontend: HTML5 (Semantic HTML), CSS3 (Flexbox, Grid), JavaScript (ES6+), React, React Router, React Hooks, Fetch API, DOM manipulation, state management, component-based architecture, responsive design, UI/UX fundamentals

Backend: Node.js, Express.js, RESTful APIs, authentication & sessions, CRUD operations, HTTP methods, JSON, async/await, error handling

Databases: PostgreSQL (SQL, Row Level Security, functions), Supabase (Auth, Realtime, Storage), SQLite, database design

Testing: Vitest, React Testing Library, MSW (Mock Service Worker)

Tools: Git, GitHub, npm, Vite, Vercel, Render, VS Code

Soft Skills: Problem solving, teamwork, communication, time management, quick learning, attention to detail

Projects

Nuva – Full-Stack Clothing Store Live Demo | GitHub

React 19, React Router 7, Supabase, PostgreSQL, Vite, Vercel

- Built and deployed a full-stack clothing store with a customer storefront (size/color variants with live stock, cart synced across devices, cash-on-delivery checkout, order tracking and cancellation) and an admin dashboard.
- Secured the data layer with Row Level Security on 9 tables and 7 PostgreSQL functions (RPC) that calculate prices, lock stock rows and run each order in a single transaction, so the client cannot tamper with prices, stock or roles.
- Developed admin tools: a realtime sales dashboard, order and monthly returns management, and product management with image uploads to Supabase Storage and stock-conflict protection.
- Improved load time by lazy-loading admin routes, cutting the main JavaScript bundle by about 22% (683 kB to 532 kB).

VanLife – Full-Stack Van Rental Platform Live Demo | GitHub

React, Express.js, PostgreSQL, Vite, Vercel, Render

- Built a full-stack van rental platform with a React frontend and an Express.js REST API backed by PostgreSQL for data management.
- Implemented session-based authentication, protected routes, a favorites feature and a host dashboard.
- Deployed the frontend on Vercel and the backend on Render.

AhmadOS – Interactive Developer Portfolio Live Demo | GitHub

React 19, TypeScript, Vite, CSS, Vitest, Playwright

- Built a browser-based retro desktop OS portfolio with window management and an interactive terminal.
- Built with React and TypeScript; added keyboard navigation and tests with Vitest and Playwright.

Education

Mansoura University Mansoura, Egypt

Bachelor of Engineering in Communications and Computer Engineering *Jan 2020 – Jan 2025*

Volunteering

Volunteer Jan 2023 – Jan 2025

University Center for Career Development *Mansoura, Egypt*

Certificates & Achievements

Employability Skills Aug 2024

Aspire Leadership Academy

Athletics Championship, 1400 m Jan 2017
